XTRADOT

about us

XtraDot Technologies is a leading innovative technology firm, specialised in the highest level of design, application development and enterprise integration.

Our consulting services include e-business, project collaboration, product development, unconventional technology, social media, e-marketing as well as branding.

***An idea that is not dangerous
is unworthy of being called an
idea at all. - Oscar Wilde***

MAIN OBJECTIVES

Our mission is to be the final resource for e-business consulting, aesthetics, innovative technologies and technically complete application design.

XtraDot nurtures and supports tech StartUps via technical partnerships on our chain of Bussinesses.

MAKING IDEAS HAPPEN

At Xtradot Technologies, our core team comprises of Web & UX Designers, Back-end Developers, Integration Engineers, Database Experts, Mobile Application Developers and e-Business Analysts & Consultants

OUR BACKGROUND

Starting up as XLabs in 2005, we went into partnership with Dragonwebs and formed DragonX Designs in 2006. In 2008, on creating the enterprise webapp: "Sangora", XtremeSoftt.Net was born, which is the web design arm of XtraDot Technologies.

XTRADOT

our process

Every project we work on is unique but our approach is always the same. Why? Because it works. We have processes in place to make sure you get exactly the results you need. No hold-ups, no nasty surprises: just effective digital design and build, tailored to your business.

It is simple: we love seeing your business grow. The process we have developed over the years combines methodology, relationships, and dedication to client success helping us execute every project both on time and on budget.

building apps that work

We have spent several years refining a process that delivers desired results. Working through different development phases, we collaborate continuously with you and your stakeholders, regularly checking against the project goals and ensuring user requirements are met.

1. REQUIREMENT ELUCIDATION

The getting-to-know-you stage of the project: we explore what you need and any ideas you've got on how to achieve it. We'll work with you to establish a clear brief, digging into that to identify the best way to go about meeting it. Initial contact is generally via email or telephone. And if you decide you want to work with us; it is time to get together for a more detailed briefing session.

OUR PROCESS

building apps that work

2. PROJECT PLANNING

This is where we define the project scope, finalise technical requirements and implement key milestones. We have got a visual tracking system in-house, and you will get a project calendar so you can see when each stage of the project will be complete. We match each stage of the plan with a sign-off point for you, so no work goes ahead without your approval.

3. SOLUTIONS DESIGN & INTERFACE ANALYSIS

Everything we have discussed so far about your project starts to take shape in the design stage. Using what we have learned from you, your industry, your customers and your competitors, we will create a visual framework and design rules to work to. At this stage, we decide how best to move from concept to completed product, integrating form and function for the best results.

4. IMPLEMENTATION & BUILD

The build phase of your project is where we take everything visual that has been created so far. We will combine the visual design with the technical elements outlined during your planning stage to create a product that looks beautiful and performs exactly the way you need it to.

5. TESTS (IAT, UAT, SIT, PT) & LAUNCH

In-house, we will work through the quality control checklist that has guided the entire project one last time. You will get a staging link so you can see the work before it goes live, and give us any last bits of feedback. Remember, you would have been signing everything off at the various project milestones, so this should not be a big job. Once that is done, it is time to go live.

6. POST IMPLEMENTATION SUPPORT

Post launch, we are on hand for any immediate bug fixes, making sure your assets are running perfectly. We can also offer you training on any systems we have used, including video tutorials for future reference. After that, it is up to you to tell us when you need our support: we are not the kind of agency that waves you off into the sunset - if you need our help or advice, we are here.

WHAT WE DO

our services

THE ENTERPRISE SERVICE BUS (ESB)

From our on-ground experience at client sites, we have noticed that the vendors conduct evaluations of their ESBs at a very high-level and go on to make observations and recommendations. However, before they could plan forward with their strategic initiatives, we warn – there is a catch!

Acting on their ignorance, these enterprises make decisions that are later repented.

The market is awash with integration tools from various vendors, and every tool has its pros and cons. Factoring in our vast experience in business application integrations, we believe that it's essential to explore the tools to understand the nitty-gritty and derive meaningful, reliable recommendations that deliver.

As part of our ESB evaluation, we have closely determined the positive and negative impacts of the integration tools on IT landscapes and their after-effects.

Essentially, the key to ESB Evaluation success depends on how well a vendor understands the clients' present and future needs, along with the

Any evaluation that's generic in nature, as published by the market research companies, will be useful to have a baseline, but not enough to map the product capabilities against specific client-specific use cases. Some clients may prefer better features over price while some may prefer security and governance over other advanced features.

Essentially, the key to ESB Evaluation success depends on how well a vendor understands the clients' present and future needs, along with the tooling in use.

API MANAGEMENT

Our dedicated team are positioned to implement a complete, modern, intuitive and scalable API platform that lets you create, securely expose, manage and monetize APIs across clouds so that you and your customers can power digital applications and spur innovation.

Easily create API proxies and visually configure or code API policies as steps in the API flow, Customize API behavior using code, transform from or to any protocol publishes APIs, Provide reference documentation, manage the audience for an API from your portal, develop portal content and reusable access controls with our three-step publishing solution.

WHAT WE DO - 2

We implement comprehensive Decision Automation Solution that helps you discover, capture, analyze, automate and govern rules-based business decisions on premises or on the cloud.

Experience the Future of Decision Making from financial planning to sales and marketing, Cloud Analytics helps businesses make end-to end decisions with confidence.

Helping organizations to optimize business operations by leveraging the power of cloud, AI and automation to transform the way work gets done, Cloud Pak and Red Hat OpenShift customers are finding significant value in our Cloud Pak for Data offering capabilities such as data virtualization, container management, lift and shift, and quick microservice deployments are just some of the exciting features of this data and AI platform.

BUSINESS PROCESS MANAGEMENT (BPM)

Businesses today are managing an increasingly large number of simple and complex processes. Business Process Management (BPM) is the ideal tool to digitize processes, bridge organizational silos, and reinvent operations, thereby enabling enterprises to stay ahead of the curve. With BPM, it enables your company to streamline your front and back-end processes and drive continuous innovation, transforming the experience of your internal and external customers.

DIGITAL BUSINESS AUTOMATION

With Digital Business Automation, automated business tasks with robotic process automation gives your employees the freedom to focus on higher-value work by automating repetitive human tasks.

Start accelerating your processes with processes automation. A Robotic Process Automation (RPA) software robot never sleeps and makes zero mistakes, Find Documents Instantly. Get Work Done Faster, interpret, trigger responses and communicate with other systems in order to perform on a vast variety of repetitive tasks, Protect Your Information, Cut Costs & Save Time.

WHAT WE DO - 3

Transform your physical data into electronic format with data capture services using advanced ICR, OCR, and OMR technologies. Click to explore solutions capturing and purifying data prior to data submission into a business process is very serious business. Let us show and help you on how to best streamline, Capture information from structured / unstructured forms and documents, accelerate, and purify your data with our piloting proof of concept service.

BLOCKCHAIN

For all businesses, Blockchain holds the promise of transactional transparency – the ability to create secure, real-time communication networks with partners around the globe to support everything from supply chains to payment networks to real estate deals and healthcare data sharing all entries in near real-time.

Right now, visionary companies are coming together to transform the way their industries work with the help of Blockchain. From a food supply that's becoming safer, smarter and more profitable to supply chains freeing themselves from legacy processes and paperwork, XtraDot has partnered

with leading Blockchain Providers leading the business world into a new era of collaboration and innovation.

CHATBOT

Our team of reliable developers would help develop and design a bot so it can start acquiring leads for you and automate next steps. A Bots that works for you all day delivering qualified leads and speeding up customer resolutions.

CUSTOMER ENGAGEMENT

Improve your Commerce Customer experience through powerful cognitive capabilities. Engage buyer journeys through personal and relevant experiences. Watson signifies the drive to build better experiences, expand expertise, and achieve greater outcomes.

Our Customer Engagement offering provides a complete range of capabilities for commerce, marketing and supply chain. Each of these offerings are designed to complement the skills and enhance the expertise, at the same time empower you to make better and more informed decisions to drive your organisation's growth.

We value emotional connection between a customer and a brand. Highly engaged customers buy more, promote more, and demonstrate more loyalty. Providing a high-quality customer experience is an important component in our customer engagement strategy.

WHAT WE DO - 4

TECHNICAL RESOURCING SERVICES

Our specialisation is a key differentiator within a competitive market. Our history of delivering complex IT projects over the past 25 years gives us an added advantage over our competitors. It is not, however enough to be an industry leader with the highest quality of contractors – so we go further.

We demand excellence in every aspect of our approach to Resourcing Services. This includes the standard of our contractors and extends to the software we use, our approach to contractor welfare and client relationship management to name a few. Our Resourcing Services business is backed up by over 200 industry specialists. We have competency guideline specialists, who are charged with vetting our contractors. This ensures that your organisation is working with only the best technical and project specialists.

Our technical screening process can include technical tests to ensure your organisation reduces the need to create these. Reducing time and strains on your internal resources, allows your team to keep moving forward and quickly assess proven candidates at the interview stage.

APPLICATION PERFORMANCE MANAGEMENT (APM)

To bridge the gap between what consumers want and what brands can currently deliver, companies are leveraging the power of cognitive computing to change the rules of engagement to quickly deliver highly personalized customer experiences across multiple channels. In this present day information technology and systems management, Application Performance Management (APM) helps in monitoring and the management of performance and availability of software applications. APM strives to detect and diagnose complex application performance problems to maintain an expected level of service.

ENTERPRISE RESOURCE PLANNING (ERP)

Our ERP implementation process involves setting up the software, customization of the modules, moving your financial data over to the new system, configuring your users and processes, and training your users on the software. Choosing the right partner for implementing your ERP system is almost as important as selecting the right software in the first place.

WHAT WE DO - 5

We have ERP Solutions to help address all of your business needs in a single, cost-effective and modular solution: no more work to get different technology cooperating. Our ERP apps are perfectly integrated with each other, allowing you to fully automate your business processes and reap the savings and benefits.

We have ERP Solutions to help address all of your business needs in a single, cost-effective and modular solution: no more work to get different technology cooperating. Our ERP apps are perfectly integrated with each other, allowing you to fully automate your business processes and reap the savings and benefits.

WEB/MOBILE DEVELOPMENT

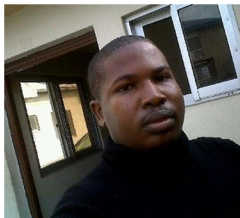

Developing quality/standard Apps is just one of the many things our team of developers do so well. Our team is comprised of Architects, UI/UX Designers, Business Analysts and Developers who are committed to creating seamless user-friendly State-Of-The-Art Mobile Applications.

SHORTCODES/USSD SOLUTIONS

Our variety of solutions includes Airtime & Data Top Up, SMS, Airtime Switching, USSD Development, Shared & Dedicated Short Codes, Short Code Integration, Cable TV Recharge, and Utility Bill Payments. The provided solutions are easily accessible to our esteemed customers through multiple service interfaces such as USSD, Mobile Apps, Web APIs, Web portals, SMS, Banking channels like ATM, Mobile banking apps, Internet banking, Microfinance and interfaces Insurance etc.

OUR TEAM
